Injection Moulds

"S": Demounting screw hole.
Please see 3D file for "S" hole
position.

Flexible Sprung Core

Thanks to its parallel walls, this core allows undercuts to be released in compact areas (only 4mm. thickness). Include a simple system for adjustment. A new feature to this product is that it ejects first then releases the undercut. Minimum space required for installation, only needs the space of an ejector. No milling, grinding or hardening other than the machining of detail needed. All drilling is 90° to the parting line. Available with and without Balinit C® coating.

The opening of the sprung cores is a radial movement.
Due to this, at the edge of the stroke, the opening is 2.5mm (0.098").
